

# TECHNICAL SOLUTIONS OF NO<sub>x</sub> DECREASE IN TRADITIONAL COMBUSTION CHAMBER OF GTE NK-16ST

© 2009 A. N. Markushin<sup>1</sup>, V. K. Merkushin<sup>1</sup>, V. M. Byshin<sup>1</sup>, A. V. Baklanov<sup>2</sup>

<sup>1</sup>Joint-Stock Company «Kazan motor building production association»

<sup>2</sup>Kazan State Technical University

The results of traditional combustion chamber with modified construction examinations are presented. Decreased concentration of toxic agents emissions in comparison with serial combustion chamber is reached.

*The combustion chamber, the lowered level of emission, experimental research*

**Markushin Andrey Nikolaevich**, The main designer of Joint-Stock Company «Kazan motor building production association». E-mail: [AMarkushin@kmpo.ru](mailto:AMarkushin@kmpo.ru). Area of research: development and manufacture gas turbine engines.

**Merkushin Valentin Konstantinovich**, The leading engineer-designer of Department of the main designer of Joint-Stock Company «Kazan motor building production association». E-mail: [AMarkushin@kmpo.ru](mailto:AMarkushin@kmpo.ru). Area of research: Designing of combustion chambers of GTE.

**Byshin Vladimir Mihailovich**, The main expert of Department of the main designer of Joint-Stock Company «Kazan motor building production association». E-mail: [AMarkushin@kmpo.ru](mailto:AMarkushin@kmpo.ru). Area of research: fuel burning with low level of emission in combustion chambers of GTE.

**Baklanov Andrey Vladimirovich**, The post-graduate student of Kazan State Technical University. E-mail: [andreybaklanov@bk.ru](mailto:andreybaklanov@bk.ru). Area of research: Burning in a turbulent stream, modelling.
