

# QUESTIONS OF HCF FOR MATERIALS AND DETAILS MODERN GTE

© 2009 A. N. Petukhov

Central Institute of aviation Motors, Moscow,

Account problems at stages of a choice of constructional materials of features of manufacturing techniques of details and the operational factors influencing HCF are considered

*Fatigue life, high-cycle fatigue (HCF), fretting, fretting-fatigue, admissible defect, stress deformation state*

**Petukhov Anatoliy Nikolaevich**, Professor, department chief “High-cycle Fatigue Materials and GTE Component” of Central Institute of aviation Motors, Moscow. E-mail: [petukhov.an@mail.ru](mailto:petukhov.an@mail.ru). Area of research: fretting, fretting-fatigue, admissible defect, stress deformation state.
