¹Ufa State Aviation Technical University

²SPE "Motor"

In work the approach to formation of complex architecture of information model for GTE with its electronic system of automatic control, the control and diagnostics is offered. It is considered at stages of experimental operational development, preparation of manufacture, manufacture and operation GTE.

Information technology, life cycle stages at test GTE, electronic system of automatic control and the control, the allocated telecommunication channel

Kulikov Gennadiy Grigorievich, Doctor of Technical Scientific, the professor of Ufa State Aviation Technical University. E-mail: gennadyg_98@yahoo.com. Area of research: system of automatic control, Management of the flying machine power-plants.

Rizvanov Konstantin Anwarovich, Candidate of Technical Scientific, the chief of a brigade SPE «Motor», the teacher of Ufa State Aviation Technical University. E-mail: rizvanovk@bk.ru. Area of research: system of automatic control, the automated information systems of GTE tests.

Denisova Svetlana Sergeevna, the engineer of the automated control systems SPE «Motor». E-mail: rodrigess@inbox.ru. Area of research: The automated systems of the information processing and management.
