¹Samara State Aerospace University

²«Progress» Design Bureau

In this paper it is shown the analysis of the onboard rocket tanks pressurization system functioning. The basic direction of the rocket tanks pressurization process are proposed.

Pressure, boost, buck, evaporator, engine, drainage, safety valves, unit of regulation, gas boost, propelling

Biruk Vladimir Vasilevich, doctor of engineering science, professor, deputy head of the department of thermotechnics and heat engines of Samara State Aerospace University. Phone: (846) 335-18-12. E-mail: Teplotex_ssau@bk.ru. Area of research: teplomassoobmen, thermodynamics.

Smorodin Aleksei Valerevich, postgraduate, deputy chief designer, «Progress» Design Bureau. E-mail: lex.samara@rambler.ru. Area of research: teplomassoobmen, thermodynamics.
