

WAY OF INCREASE IN EFFICIENCY OF CYCLE GAS TURBINE UNITS

©2009 V. A. Ivanov

Joint-Stock Company «Aviadvigatel», Perm

The opportunity of increase in work and increase of effective efficiency of complex cycles is considered on the way increase in a degree of increase of pressure up to optimum on effective efficiency for a simple cycle under condition of ensuring of equality of effective efficiencies simple and complex cycles as criterion of efficiency of the last.

Gas turbine Units, cycle, effective efficiency, optimization

Ivanov Vadim Alexandrovich, Candidate of Engineering Science, 1st class design engineer in “Aviadvigatel” Public Corporation. E-mail: iva-perm@rambler.ru. Area of research: optimization of gas turbine engine heat cycles.
