¹Samara State University of Railway Transport

²JSC «Motorstroitel»

The basic toxic components of the fulfilled gases of engines are nitrogen oxide. One of the most perspective methods of decrease in toxicity of diesel engines is the method not catalytic reaction restoration NO_x by ammonia. The design procedure of the constructive sizes of neutralizer taking into account features of diesel engines is developed.

The fulfilled gases of transport diesel engines, nitrogen oxide, a method not catalyzed restoration by ammonia, a design procedure of the constructive sizes of neutralizer

Frolov Sergey Gennadievich, post-graduate student of Samara State University of Railway Transport. Address: 443115 Samara, Litvinov str. 33. Pyone: (846) 999-01-84. Area of research: Heat engines.

Roslyakov Alexey Dmitrievich, Doctor of Engineering Science, professor, chief specialist of JSC «Motorstroitel». Address: 443023 Samara, str. Promyshlennosty 281-34. Phone. (846) 261-12-01. Area of research: Heat engines, diagnostics.
