

OBLITERATION'S PROBLEMS IN CAPILLARY-POROUS STRUCTURES OF AEROSPACE HYDRO SYSTEMS' PARTS

© 2009 E. A. Izzheurov, D. A. Uglanov

Samara state aerospace university

This paper deals with a problem of locking (obliteration) in capillary structures and porous parts used in aerospace hydro systems. It is shown the results of this process' computational modeling.

Stream of liquid, capillary structures, porous elements of hydrosistem, numeral design

Izzheurov Evgenii Aleksandrovich, doctor of engineering science, professor of department of automatic systems of power plants of Samara State Aerospace University. Phone: (846) 335-86-51, 267-43-36. E-mail: Iszheurov@ssau.ru. Area of research: metalo-rezina, research of flows of liquids in capillary structures, laser technique, nanotechnologies, systems of cooling of power ustano-vok.

Uglanov Dmitrii Aleksandrovich, candidate of technical science, the senior lecturer of department thermotechnics and heat engines of Samara state aerospace university. Phone: (846) 335-18-12, Teplotex_ssau@bk.ru. Area of research: systems of lasers, systems of cooling of power plants, research of flows of liquids in capillary structures hydrodynamics of involute streams.
