

# FEATURE OF OPTIMIZATION OF PARAMETERS OF WORKING PROCESS GTE WITH THE FREE TURBINE AT INITIAL DESIGNING IN THE CONDITIONS OF UNCERTAINTY

©2009 A. I. Gretzkov, V. A. Grigoriev

Samara State Aerospace University

Basic design of aircraft is characterized by uncertainty of GTE; multicriterion - uncertainty of purpose; uncertainty (predictive of) the source of design data and other project solutions in these circumstances can be to find areas of compromise. Given these characteristics of the area received good values for workflow small helicopter GTE.

*Engine, Gas-turbine, Helicopter, criterion, zone of compromises, data*

**Gretzkov Aleksandr Igorevich**, postgraduate Student of Samara State Aerospace University. E-mail: [Gretzkov@gmail.com](mailto:Gretzkov@gmail.com). Area of research: choice of parameters and planning of aviation gas-turbine engines.

**Grigoriev Vladimir Alekseevich**, Doctor of Engineering Science, Professor of Samara State Aerospace University. Phone: (846) 335-64-37. E-mail: [grig@ssau.ru](mailto:grig@ssau.ru). Area of research: choice of parameters and planning of aviation gas-turbine engines.
