

# HYDRODYNAMIC RINSING OF HYDROFUEL SYSTEM' UNFLOWING UNITS

© 2009 V. M. Reshetov

Samara State Aerospace University

Present main result of research methods and techniques intensification rinsing of hydro-fuel units bodies and hydro-cylinders by oscillations' flow. Rinsing Schematics with single- channel fluid generator and box of boundary conditions. The decreasing of rinsing duration 2-3fold and increasing of removed particles 1.5-2fold as compared with steady-state rinsing.

*Hydro-fuel system, un-flowing units, rinsing, oscillations' flow*

**Reshetov Victor Mihailovich**, head of laboratory to chair Control Systems of Power Plants Samara State Aerospace University. E-mail: [vmresh@rambler.ru](mailto:vmresh@rambler.ru). Phone: (846) 267-46-68. Area of research: dynamics of hydraulic and pneumatic systems, tests and operation, industry cleanness (rinsing) of hydraulic and pneumatic systems cavity.
