

DEVELOPMENT OF ADVANCED LOW THRUST ROCKET ENGINES WITH ECOLOGICALLY FRIENDLY PROPELLANTS

© 2009 R. H. Kutuev, I. N. Lebedev, V. L. Salich

FSUE R&D Institute of Mechanical Engineering, Nizhnyaya Salda

The results of development of the low thrust rocket engines with fuel compositions oxygen/kerosene, oxygen/ethanol, oxygen/hydrogen, oxygen/methane are presented.

Low thrust rocket engine, ignition system, combustion chamber, ecologically pure fuel compositions, computational modeling

Kutuev Rashit Hurmatovich, sector chief of Scientific-and-designing department of R&D Institute of Mechanical Engineering, Nizhnyaya Salda. Phone: (34345) 36-433. E-mail: nii-mash@list.ru. Area of research: design-theoretical and experimental investigation of operating processes in liquid thrusters.

Lebedev Igor Nikolaevich, candidate of technical Science, Head of research division for advanced developments of R&D Institute of Mechanical Engineering, Nizhnyaya Salda. Phone: (34345) 36-246. E-mail: niimash@list.ru. Area of research: shock wave heating, ignition, enhancement of mixing and combustion in gaseous and liquid-gas media.

Salich Vasily Leonidovich, candidate of technical Science, leading research engineer, Head of research division for advanced developments of R&D Institute of Mechanical Engineering, Nizhnyaya Salda. Phone: (34345) 36-246. E-mail: salich_vas@mail.ru, niimash@list.ru. Area of research: thermodynamic processes in rocket engines and powerplants, mathematical simulations of combustion chamber processes.
