¹Togliatti State University

²Ulianovsk State Technical University

Problems of designing machines with reduced vibroloading are discussed. Theoretical foundations and various methods of reducing machine vibration are proposed: using pneumatic self-pumping balancing device, active vibration isolation, designing electric drives, reduction of mobile machine vibration under moment disbalance etc.

Machines, designing, theory, methods, vibroloading.

Vasilyev Andrey Vitalyevitch, doctor of technical science, professor, director of the Institute of chemistry and engineering ecology, Togliatti State University, e-mail: avassil62@mail.ru. Area of research: science of machines, vibroacoustics, engineering ecology, ecological monitoring.

Gleyzer Abram Isakovitch, doctor of technical science, professor, professor of the department of mechanics and engineering protection of environment, Togliatti State University, e-mail: nil9@tltsu.ru. Area of research: science of machines, mechanics, vibroacoustics.

Dmitriyev Vladimir Nikolayevitch, doctor of technical science, associate professor, head of the department “Electric drive and automation of commercial plants”, Ulianovsk State Technical University, e-mail: eapu@ulstu.ru. Area of research: science of machines, electric drives of machines, automation of commercial plants.

Prasolov Sergey Guennadyevitch, candidate of physical and mathematical science, associate professor, deputy director of the Institute of chemistry and engineering ecology, Togliatti State University, e-mail: nil9@tltsu.ru. Area of research: science of machines, mechanics.
