Mechanical diagram and design of an electric drive for cut-off valves based on wave gearing is proposed. The drive provides mass reduction, maximum moment increase, element position control, deviation in extreme positions. Two standard sizes of the drive are realized and tested.

Flexible gear, wave generator, epicycle.

Itbayev Valery Kayumovitch, doctor of technical science, head of the department “Fundamentals of designing machines and mechanisms”, Ufa State Aviation Technical University, e-mail: okmim@ugatu.ac.ru. Area of research: science of machines, designing machines and mechanisms.

Prokshin Sergey Sergeevitch, candidate of technical science, associate professor of the department “Fundamentals of designing machines and mechanisms”, Ufa State Aviation Technical University, e-mail: okmim@ugatu.ac.ru. Area of research: science of machines, designing machines and mechanisms.

Gromakovsky Dmitry Grigoryevitch, doctor of technical science, professor, director of scientific-and-technological centre “Reliability of technological, energy-converting and transport machines” of Samara State Technical University, e-mail: pnms3@mail.ru. Area of research: friction of machine elements and units, science of machines.

Vasilyev Andrey Vitalyevitch, doctor of technical science, professor, director of the institute of chemistry and engineering ecology, Togliatti State University, e-mail: avassil62@mail.ru. Area of research: science of machines, vibroacoustics, engineering ecology, ecological monitoring.
