

# INCREASING THE RELIABILITY OF AIRCRAFT COMPONENTS BY REGULATING TECHNOLOGICAL RESIDUAL STRESS

©2009 V. A. Kirpichyov, V. S. Vakulyuk, A. V. Tchirkov

Samara State Aerospace University

The paper shows the possibility of forecasting residual stressed state of component surface layer after strengthening and the optimization of strengthening effect. Methods of defining residual stress are developed and a theory of its influence on fatigue strength is proposed.

*Residual stress, residual stress concentration, diagram of component cycle limiting amplitudes.*
