²Ural State Technical University

In this paper it is shown the ways of automatization using in design process of new gas turbine engines with decreased blowout nitrogen oxides.

Design automation, emission prediction, parameter optimization.

Orlov Michail Yurjevich, Candidate of Engineering Science – associate professor of SSAU “Heat Engineering and Heat Engines” department. Phone: 8 (846) 3345613; E-mail: teplo-tex_ssau@bk.ru. Area of research: combustion processes, internal combustion engines, diffusion and heat-mass exchange processes, CALS-methods.

Gulina Svetlana Anatoljevna, senior lecturer of Ural State Technological University “Gas Pipelines Equipment and operation” department. Phone: 8 (8343) 8434841, Fax: 8 (8343) 8434812. E-mail: kr_oeg@mail.ru. Contact Address: Branch of Ural State Technological University, Krasnotyrinsk town, Lenina Str. 41, ZIP Code 624460. Area of research: gas turbine engines, designing, optimization, diffusion and heat-mass exchange processes, CALS-methods.

Uglanov Dmitry Alexandrovich, Candidate of Engineering Science - associate professor of SSAU “Heat Engineering and Heat Engines” department. Phone: 8 (846) 3351812, Fax 8 (846) 3345613. E-mail: dmitry.uglanov@mail.ru Area of research: gas turbine engines.
